

FUTURE GROWTH BURNING BRIGHT WITH SAP S/4HANA®

Together with itelligence*, we were able to fundamentally modernize our IT landscape in a short time. We now have a flexible system that supports our company strategy and enables us to use new technologies and agile processes.

Anna Rokossa, CEO, Camina & Schmid Feuerdesign und Technik GmbH & Co. KG

Challenges

- Process requirements, inventory transparency, and reporting not supported by the legacy system
- Insufficient support for future company growth and development of new markets
- System needed to be rolled out to the production facility in Rathenow to bring sales and manufacturing closer together

Solutions

- SAP S/4HANA implementation in the areas of procurement, sales, distribution, manufacturing, accounting, and finance
- A greenfield approach to merging two companies
- New systems hosted in the NTT DATA Business Solutions data center in Bautzen, Germany

Benefits

- Entire value chain represented in a central ERP system that serves all locations
- Minimized complexity via reduction of interfaces and redundant data storage
- Integrated processes between logistics, accounting, and financial management
- Improved inventory transparency

Why NTT DATA Business Solutions?

- Extensive experience in SAP S/4HANA implementation
- Secure investment thanks to a future-proof and scalable ERP solution
- Project environment built on trust

Company: Camina & Schmid Feuerdesign und Technik GmbH & Co. KG

Industry: High-Tech and Electronics

Products: Production and sales of heating and chimney inserts for wood stoves and fireplaces

Number of employees: 120

Turnover: Approx. 30 million EUR (2016)

Headquarters: Bissendorf, Germany

* Since April 1, 2021 itelligence is operating as NTT DATA Business Solutions

SAP S/4HANA implementation with 50 users

Bright New Potential with SAP S/4HANA

Working out of two locations in Germany, Bissendorf and Rathenow, Camina & Schmid produces heating and chimney inserts for wood stoves and fireplaces. The company has positioned itself as a market leader in its industry with innovative and quality products with the “Made in Germany” label. In order to support future growth, Camina & Schmid wanted to replace its existing systems with the SAP S/4HANA solution. With it, Camina & Schmid would benefit from an agile system that can cope with increasing demands for years to come.

Merging Two Companies with a Greenfield Approach

Before the merger between Schmid Feuerungstechnik GmbH and Camina Feuerungssysteme GmbH could take place and new systems could be implemented, there first needed to be a mutual understanding of the process. In the initial stages, requirements were identified and addressed in accordance with a best_x0002_practices approach. A prototyping model was used in the implementation phase to adjust processes and functions to meet the specific needs of the company

Migration of Master Data – When Two Become One

One part of the implementation phase concerned the transfer of both companies’ master data into the new production environment. Since a great deal of manual effort was needed to prepare the master data, a “golden client” approach was adopted. This approach means that required master data is compiled and stored in a cleansed form right at the beginning of implementation. The golden client grows as the project progresses and forms the basis for the productive system. The crucial benefit is that data does not have to be prepared externally and then migrated. Instead, it is stored directly in the SAP® environment and can be used for prototype tests right away.

Target-Oriented and Harmonious Collabora_x0002_tion on All Level

In addition to replacement of non-SAP legacy systems, staff resources also presented a challenge as implementation was to be completed during a 5-month period with just four key users. As the project would run parallel to daily operations, close collaboration and a high level of engagement from key users was required to carry out the project.

Phase 2: New Operating Concept with SAP Fiori

After go-live, optimization began on certain processes and functions in phase 2. In this phase, knowledge from key users and end users was taken into account in order to focus on creating a new operating concept. The innovative SAP Fiori user experience will be used for further optimization in the future. SAP Fiori offers role-based apps to its users, can be used on mobile devices, and has a modern and functional design. During phase 2 of SAP S/4HANA implementation, Camina & Schmid were able to take on the challenges of a new operating concept with its processes already optimized.
