experts

What students expect from universities and colleges when they enrol? The freedom and flexibility to tailor their study programme according to their individual situations. it.education offers an answer to those needs and improves performance, satisfaction, and retention. Furthermore, it.education provides university or college employees with integrated digital support and a comprehensive overview.

### The Path to Student Success Starts with a Strong Digital Foundation

Today's students know what they want. Now, more than ever, students demand better control over their own study programme. Including the opportunity for flexible study paths. Without any hassle, they want to structure their education with courses from different universities, perhaps even internationally. They also want to take subjects from different courses, space out their hours of study, or be able to take a gap year.

### Embrace Lifelong Learning

The image of the 'traditional' student, who studies for four years and then moves on to a job, is changing. Lifelong learning is becoming the norm. Courses, additional subjects, or part-time courses: Professionals are looking to increase their level of knowledge while remaining in the workforce. And, they continue to do so throughout their careers.

Lifelong learning opens up a world of possibilities for educational institutions. For this reason, a growing number of universities is offering a wide range of options for all types of students, in addition to their programmes for full-time students. There is a catch, however. Conventional registration systems – developed for full-time study programmes –

are often inadequate in terms of the digital support they provide. This applies to the support given to full-time students as well, who also require flexibility in their curriculum.

### Learn to Understand Student Needs

In other words: Today's students want value for money, flexible learning, easy access to study information, and (digital) support during their studies. This requires an intelligent, digital solution, that helps universities to understand student needs and let them take control over their own study pathway.

### A Solution for Every Role

Time for a solution that supports the full student life cycle. From single course student, to degree seeking student, to international student. it.education offers an environment that isn't only user friendly, but also provides students a clear and real-time understanding of their performance and progress throughout their academic career.

it.education does not only give students control over their curriculum, it also provides university professionals with a comprehensive overview of learning pathways. Tailored to students, educators, and support staff alike, it.education goes beyond traditional Student Information Systems. It's a solution that enables educators to design their own course offerings. As a fully integrated system, it.education offers a user specific experience, reflecting each individual's role within an institution.

**Discover the Benefits of it.education**

- Control over progress - students monitor their own progress. From registering for assessments and getting an overview of their progression, to their financial situation and the submission and retrieval of documents. During this process, the system actively informs them about the status of registrations, requests, grades, and more.
- Fully integrated - no patchwork of systems, but a simple-to-manage solution in which all processes come together.
- Supports every type of student - traditional and international students, course participants or exchange students: Every type of student is supported by the solution.
- Powerful analytics capabilities - provides tutors, students and support staff with direct insight into relevant data.
- No needless customisation - it.education is based on proven best practices.
- Usable on all devices - students can view their progress anytime, anywhere; remaining actively involved even from a distance.
- Consistent front-end user experience - for students, tutors, mentors, and employees through a user- friendly self-service portal.

**Make a Difference with it.education**

A seamlessly integrated user experience for students and tutors, mentors, and staff. The same front-end is used by everyone and the back-end provides tutors and staff with perfect digital support for their tasks.

**Registration**

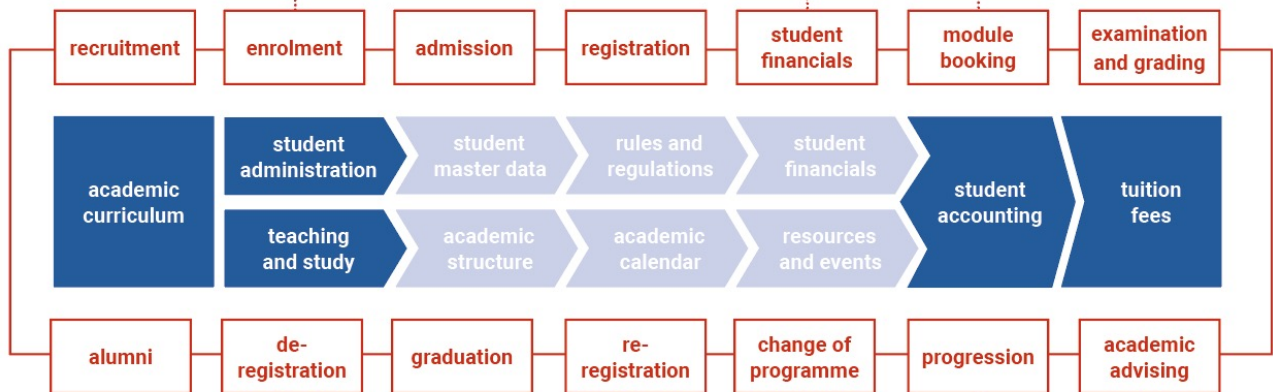

From the online application form to the acceptance letter: Students monitor the status of their application online.

**Student finance**

Students have real-time insight into tuition fees, accommodation, visa associated costs, parking cards, study-specific costs, and other study-related expenses.

**Module booking**

Students can quickly enrol, amend or withdraw from courses. If they wish to switch to a different course, they can ask for advice online.

**Progression**

Students have control over their own progress, but tutors and advisors can also monitor this. If someone is behind schedule, a tutor can intervene quickly and offer support. Based on the available data, there is also an option to predict progress and performance.

## Package Option

### Our Education Package

**Scope**  
For institutions with more than 5.000 students

**Implementation time**  
12-24 months\*

\* Depends on scope, size and complexity.

### We Transform. SAP® Solutions into Value

Haal alles uit je organisatie door te kiezen voor de juiste technologie. Met onze ervaring en expertise weten we precies wat je nodig hebt om van jouw digitale transformatie een succes te maken. NTT DATA Business Solutions ontwerpt, implementeert, beheert en verbetert SAP-oplossingen, zodat jij en je werknemers zich kunnen richten op je klanten en op groei.
