

SAP Cloud Platform (SCP) – the Agile Solution for Your Systems

# The Future Is the Cloud – SCP Connects and Expands On-Premises and Cloud Systems

---

The question isn't whether businesses should work with a cloud platform, but when. Because digital business models demand greater flexibility. When it comes to providing the required services and functionality, we recommend the SAP Cloud Platform.

Expert Center of Excellence NextGen Solutions,  
itelligence AG

70%

of all software fails because users are unable or unwilling to use it

## Smart and Visually Appealing

# The Platform for Every Application – Standardization Meets Expansion Tool

### The Cloud Solution That Does More

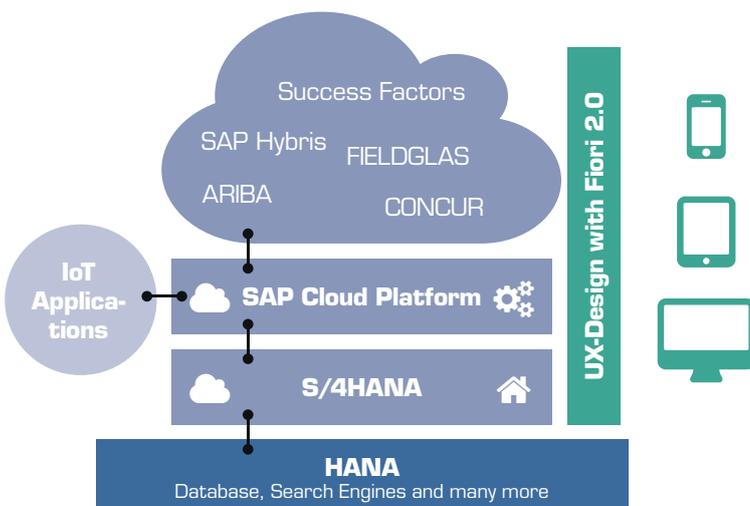

The future for businesses is digital. So what's the best and most transparent way of displaying existing applications on intuitive interfaces for employees and customers?

itelligence has the solution: SAP Cloud Platform (SCP), an extensive cloud-based development and application tool, lets you integrate and enhance applications to make them intuitive for users. It uses services in the cloud to shape interfaces that display all data and processes.

### The Hybrid Scenario – Tomorrow's System Architecture? Or Already of Today?

As a platform for hybrid systems, SCP lets you connect on-premise systems to the cloud, and flexibly expands and integrates SAP and non-SAP systems. You can also provide multiple services from any on-premise system in the cloud via a secure connection, using SAP Cloud Connector.

And SCP provides safe, simple access to IoT, mobile and other off-premise systems and cloud applications. SAP offers a future-proof platform as a service (PaaS), with agile, state-of-the-art development tools and services.

**Easy on the Eye – Start the User Experience before the Development**

The SAP Build Service in the SCP supports a flexible, completely user-centered development process. New solutions are designed via the cloud platform in cooperation with end users and in accordance with Fiori design guidelines. Involving users from the get-go guarantees them a positive user experience. They benefit, and so do you: they get intuitive interfaces that deliver the right content at the right time, and you get lower implementation costs because you no longer receive expensive change requests just before you go live.

intelligence’s wide-ranging methods and technology know-how include generating ideas to incorporate user needs, designing working prototypes, SAP process consulting as well as programming and delivering new applications. The final result lets you build totally new processes using innovative technology.

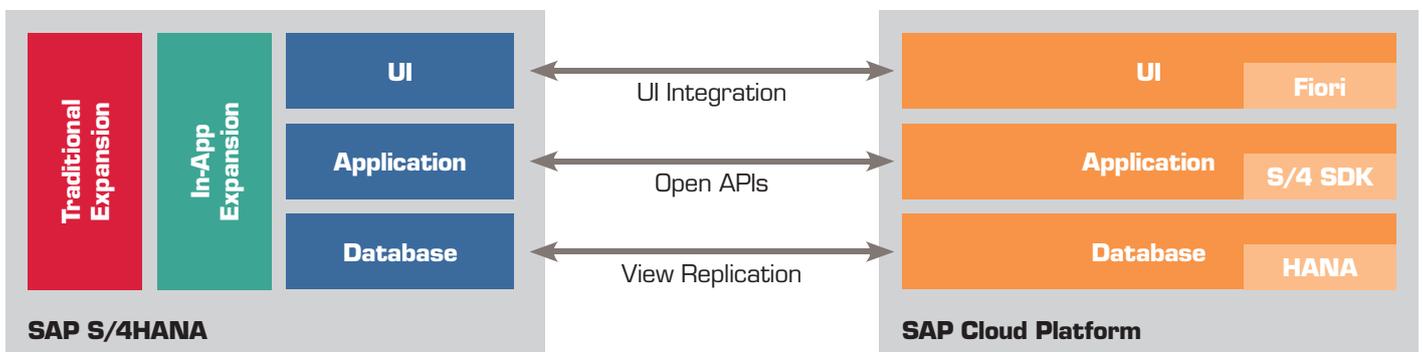

Development Costs Drop and “Joy of Use” Increases When Users Are Integrated into the Design Process from the Get-Go

**Side-by-Side Enhancements for the Digital Business**

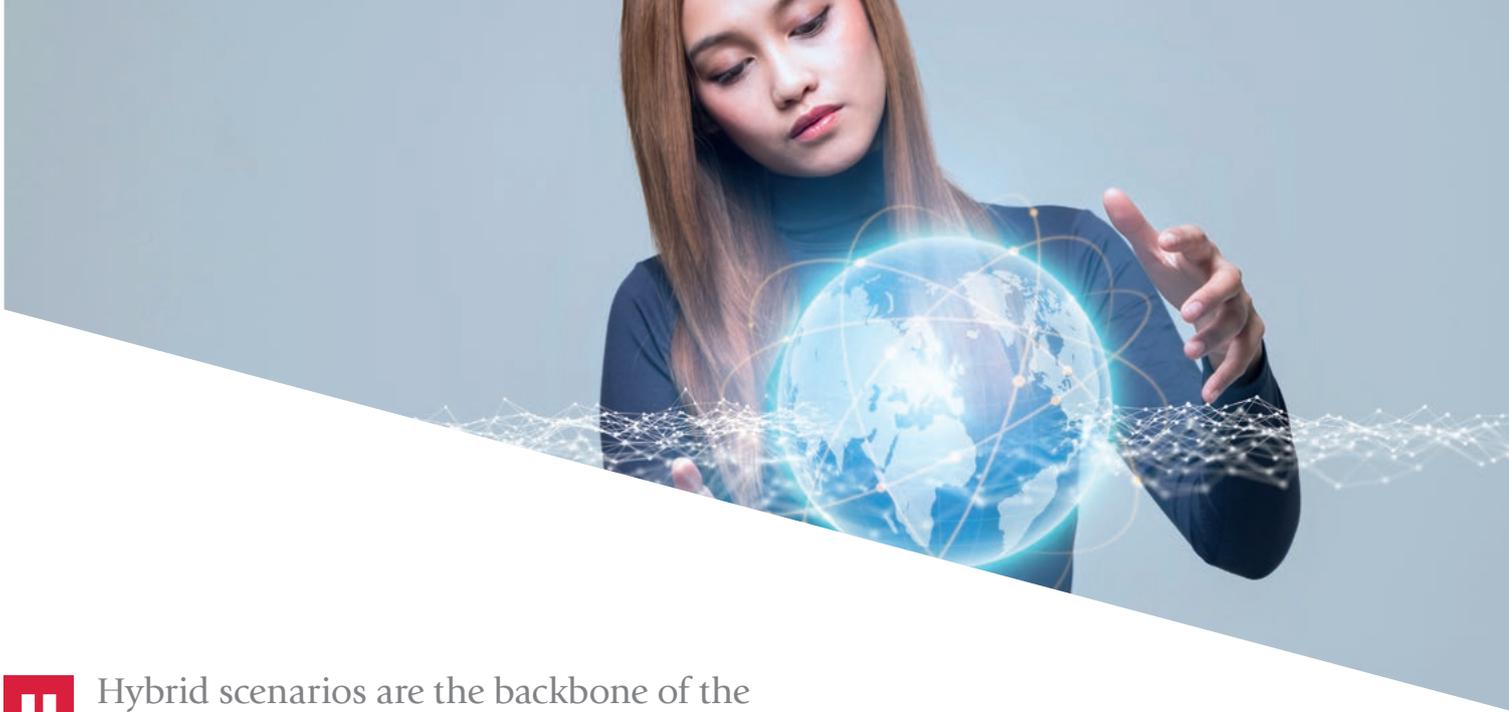

SCP makes it easy to expand your existing S/4HANA to incorporate new services, cloud applications, and

functions. Simply move them to SCP, and run them side by side. Your advantage? This leaves your digital core unchanged, making backend maintenance and upgrades much easier.

**Side-by-Side Enhancements**

All Other Cloud-Based Applications (SaaS), Such as SAP Hybris Sales Cloud and SAP SuccessFactors, Can Also Be Expanded via SCP.

Hybrid scenarios are the backbone of the digital transformation and the future of the cloud.

Nico Bredenbals, Head of Center of Excellence NextGen Solutions, itelligence AG

### The Three Core Functions of SCP

1

#### Expansion Platform

Enhances on-premise and cloud applications

2

#### Integration Platform

Integrates data and applications from SAP, non-SAP, and cloud systems

3

#### Development Platform

Provides its own development environment for applications and services that can be connected to SAP and non-SAP systems

### Our Services at a Glance:

- Architecture planning for hybrid systems
- Managing cloud project development
- Planning hybrid development environments for continuous delivery
- Fiori design consulting
- Consulting and programming of side-by-side enhancements

**Do you want to find out more about SCP? Feel free to contact us. Our consulting services show you how to efficiently use SCP for your business.**
