- First-class support at an attractive, fixed price

1 consistent
customer approach

CRM for a Customer-Centric Company

Sluyter Logistics is a full-service logistics provider that aims to build long-term relationships with its clients by offering tailored, cost-efficient solutions for any logistical issue. With 275 employees working across nine locations, Sluyter was looking to streamline the relationship between its marketing and sales processes.

The company's existing ERP solution was specifically designed for the transport and logistics sector; however, it failed to provide optimal support for CRM processes. As Desirée Langius, Account Manager at Sluyter Logistics explains: "The CRM portion did not meet our expectations, so we went looking for an alternative."

That alternative was SAP Hybris Cloud for Customer. The solution represents a complete online CRM package that allows users to view customer data via mobile device – an essential feature for a company whose consultants are often out in the field. For support with the implementation, Sluyter opted to rely on itelligence's experience with similar projects for other logistics companies.

 The flexibility and innovations of SAP and itelligence help us to discover potential new customers and further develop our existing relationships.

Desirée Langius, Account Manager, Sluyter Logistics

The Right Solution. The Right Partner.

itelligence advised Sluyter from the outset, helping the organization settle on the right solution. Once

the choice had been made, Sluyter benefitted from itelligence's expert support in implementation, based on the expertise they had gained in previous SAP projects in the logistics sector. This resulted in a solution perfectly aligned with the company's specific CRM needs.

Delivering Opportunities Now and in the Future

The implementation of SAP Hybris Cloud for Customer benefited Sluyter in many ways. "We can now do much more with the customer database we are building," enthuses Langius. For example, there is a smooth integration with Microsoft Outlook for mailings; managers can update the customer database themselves via iPad; and Excel tables can be edited in real time.

Furthermore, the solution's mobile functionality means that Sluyter employees always have access to live customer information. This enables them to tailor their support to the individual, resulting in higher customer satisfaction and a greater chance of securing new business. The module for opportunity management is also helpful in this regard, allowing the company to better identify its customers' wishes and needs.

SAP Hybris Cloud for Customer has helped Sluyter harmonize sales and marketing processes across the organization. This in turn minimizes consultation time between employees in different locations. And Langius is well aware of the potential for further optimization: "With renowned ERP specialists like SAP and itelligence, we have the opportunity to streamline other processes, so the entire organization can benefit from this project in the long term."
