

itelligence – Your Expert for Supply Chain Execution

# More Than Just the Sum of Its Parts: Consistent Supply Chain Management with SCE

---

With the present solution, we could eliminate a blind spot in our flow of information and push the integration of our isolated applications into SAP easily and cost-efficiently.

Integrated Warehouse and Transport Processes for a Consistent Flow of Goods

## Optimum Transparency in Logistics with Supply Chain Execution & itelligence

### **Reacting Quickly and Flexibly to Complex Market Requirements**

The Industry of Things, omni-channel commerce and modernized logistics processes present great challenges for supply chain managers and require new IT strategies.

It's the development to the "vitreous company" that makes logistics transparent. Mobile devices allow access to all orders – for everyone, at any time, and everywhere. Rapidly growing amounts of data have to be processed and analyzed efficiently. This means that an end-to-end integration of all players and activities via intelligent, consistent digital technologies is critical to the success of supply chains.

Due to our experiences, we know that current database models and SCM modules are reaching their uppermost performance limits in transparency, speed, and flexibility. With sustainable supply chain solutions offered by SAP, itelligence provides maximum efficiency in logistics – today and in the future.

### **itelligence and SAP for a Holistic, Integrated SCE Solution**

As a full-service provider, itelligence has combined cross-industry business process expertise with broadly diversified SAP integration know-how for more than 25 years. Our SCM experts know the cross-company processes of your supply chain and are aware of emerging challenges in information and data exchange between external systems.

With highly integrated solutions like SAP Extended Warehouse Management (SAP EWM) and SAP Transportation Management (SAP TM), we ensure an optimal interaction of the individual supply chain areas, warehouse logistics, transportation systems, and track & trace.

Hosting and application  
management services

 Being a successful SAP partner for the medium-sized business sector, we combine cutting-edge SAP solutions with industry-specific functions that adapt perfectly to the requirements of your company.

#### Your Benefits at a Glance

- Synchronization of goods movement
- More transparency and consistency
- Process automation
- Integration of mobile technologies
- Faster response and processing times
- Data analysis in real time
- Flexibility and scalability
- Improved order management
- Increased employee productivity
- Minimization of returns and bugs
- Optimized inventory
- More efficient resource allocation
- Reduction of logistics costs
- Increased customer satisfaction
- Maintenance of compliance

#### From Traditional Databases to Real-Time Applications

SAP's supply chain products are running on the high-performance, intuitive in-memory computing platform SAP HANA. With this approach, you can manage and analyze your data in real time, make evidence-based decisions and achieve better business results.

#### International Knowledge Transfer, Global Competency, and Local Presence

As globalization increases so do the requirements on your logistics. Numerous supplier and locations have to be interconnected. At the same time, cultural and linguistic differences, and legal requirements have

to be observed. In this context, you need a partner who is familiar with the processes of internationally operating companies. As global partner with 23 locations, we are always close to you. As member of the NTT DATA Group, we have direct access to expert know-how of more than 9,000 international SAP consultants.

#### itelligence Makes the Difference

With our data centers, we are your global support and maintenance partner around the clock for your SAP systems, application management, and hosting services. As a technological leader, we are at the cutting edge of SAP developments to help you successfully realize innovative topics like SAP Mobility, Analytics, Cloud or the Internet of Things in your company.
