

Make your SAP system compliant to the new legal requirement in France

New financial reporting requirements from the French government. In France as of January 2014, a new legal requirement (ie. "arrêté du 29 juillet 2013 ») imposes French firms to submit accounting document records for the closed fiscal year in a dematerialized format, the so-called FEC ("Fichier d'Ecritures Comptables", Article L47 A I). Non compliance can be fined with 0,5% of yearly revenues.

Proposed solution: it.demat from itelligence
It.demat is a proven software package built and updated by itelligence France, in order to produce the new legal report "Fichier d'Ecritures Comptables" automatically and rapidly.

it.demat is not a SAP DART based tool, the alternative which can also be configured in your SAP system, but for a separate quotation from itelligence or your SAP partner, and at a higher cost.

it.demat has many benefits, and the main one is to benefit from a proven, pre-packaged tool which is potentially easier and cheaper to implement than alternatives.

We estimate savings of up to 50% by buying it.demat, compared to building the interface in house.

We therefore strongly recommend to use it.demat as your tool to comply with the law.

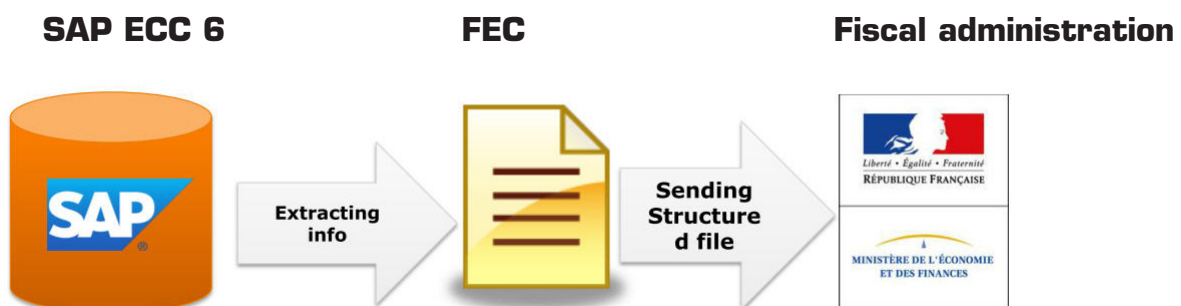

Please ask for a copy of the law "article L47 A I" (in French), if needed, or contact us for further information.

Deliverables

- Set-up and customizing
- Technical documentation
- Key user documentation
- Training

Price

Fixed price 8,500 € including implementation (VAT Excluded).

Benefits

- Compliance to the new legal requirements
- Fully integrated ERP solution
- Easy to install (SAP transport requests)
- Easy to customize (FI document types ...)
- Multi format extractions (XML, .csv)
