(Co)Design Changes

it.transform Guarantees the Successful Transformation of Your Data and Processes

Constantly changing business models, infrastructure and processes have become the norm in business. This means IT systems and structures must be combined, separated or modified in response to company mergers, acquisitions, sales or restructuring. Such changes also require adjustments to the SAP system environment: a complex task for medium and large-sized companies but definitely manageable.

But transformation projects are much more than just IT projects. These types of projects affect the entire company including all relevant processes, data, organizational units and technologies used. Furthermore, requirements related to the digital transformation or SAP S/4HANA conversion must be implemented.

it.transform Offers the Right Solution for Your Transformation

In the it.transform method, we combine many years of consultation expertise with software tools to analyze, structure, plan and professionally implement customized transformation projects – step by step.

It is important to note that an IT transformation does not have to mean starting from scratch since it.transform's methods, tools and work packages let you transfer all your data and document history to a new system with new processes.

Proven Project Methodology from Decades of Experience

it.transform sets itself apart by allowing you to transform both, data and processes, and by taking a holistic view of organization and IT. By defining clear goals and strategies, the framework of the transformation project is set to identify and minimize technical, legal and resource-related risks.

The detailed project planning also takes into account other ongoing projects in order to eliminate negative influences and guarantee a smooth process. it.transform is the ideal method for your transformation projects due to its extensive quality, budget and schedule settings and numerous checklists, settings and tools.

# You Can Transform Your Data and Processes with the Right Combination of Methods and Tools

Merger & Acquisition

Combine Data and Processes Related to Finances and Logistics

- Reduced IT costs
- Simplified support and maintenance
- Standardized processes and data

Carve-Out

Carve-Out of Companies or Business Units and Transfer into a New SAP Environment

- Creation of its own system
- Split companies
- Reorganized and documented processes

Reorganization

Change the Organizational or Master Data

- Restructured profit centers or cost centers
- Restructured material numbers or product hierarchy
- Simplified accounting
- Preparation of global roll-out templates

Harmonization

Standardize Organizations, Processes and Data

- Standardized processes
- Harmonized data
- Preparation of shared services

> ❚❚ A carve-out project is similar to our products in that it's all about the right combination. We managed it this time around and achieved the desired success: done on time and budget and with the right quality.

Christian Konrad, Project Manager Europe, Dawn Foods Germany GmbH

Welcome the Future – with the Right Partner at Your Side
